Ponde. 1602.

# A new Almanacke

and Prognoſtication for the

yeare of the Natiuitie of our Lord

and Sauiour Ieſus Chriſt.

M. DC. II.

Being the ſecond after leape yeare.

Calculated and certified for the

Latitude and Meridian of the hono-
rable Citie of London, and may
very well ſerue for all England:
Containing diuers and ſundry true
and profitable additions, and com-
pendious rules: more then euer here-
tofore hath been ſet forth by any, as
the contents following more plain-
lye doth expreſſe: Collected accor-
ding to Arte.

By Edward Ponde, practitioner

in the Mathematickes.

Imprinted at London by the

aſſignes of Iames Roberts.

| Indictio Romana. | 15. |
| The Dominicall letter. | C. |

Betweene Christmas and Shroue sunday, is vii. weekes and two dayes.

| | |
|---|---|
| Easter day in April. | 4. |
| Ascension day in May. | 13. |
| Whitsunday in May. | 23. |
| Aduent Sunday in Nouember. | 28. |

# To the Reader.

IF thou canſt ſhoote, thy bowe not bent,
and ſtrike the marke, thou dooſt not ſpye,
If thou canſt play, the Lute not ſtrung,
and duly make true Harmony.
Then mayeſt thou iudge before thou read,
and hit the marke, thou neere camſt nye:
Then mayeſt thou teach, thou being dead,
And eke reprooue, with modeſtie.
But if thou ſhooteſt, or muſicke make,
Firſt muſt thou ſtringe, both Lute and Bowe,
Then if this booke, thou meanſt to take,
fyrſt learne, the perfect vſe to know.

## The contents and vſe of this preſent Almanacke and Prognoſtication. 1602.

1 THe Anatomy of mans body, and the gouernment of the twelue ſignes in the ſame.

2 The number of dayes contained in euery moneth.

3 The Dominicall, or ſunday letter, and the weeke dayes.

4 All feaſtiuall daies, others, both moueable and fixed.

5 The number of Sundayes in Lent, after Eaſter, after Trinitie, and Aduent, noted for the readie finding of the ſame, & for the reading of diuine ſeruice appointed.

6 The entring of the Sun in euery of the 12. ſignes.

7 The beginning & ending of euery Terme, with their returnes, noted in ỳ Kalender, according as they are kept.

8 When weddings may not be ſolemnized without licence.

9 The beginnings of the raignes of euery of the Kings and Queenes of England, ſince the Conqueſt of the ſame by

by William Duke of Normandie. The number of yeeres since the time they began their reigne, vntill this present yeare 1602. The number of yeares, months, and dayes, that each King raigned, noted in the Kalender: his name being set vpon the day of the month whereon he began his raigne: as by example I will make more plaine vnto you, as thus. King Edward the 3. began his raigne, the xxv. day of January 275. yeares, before this present yeare and time, and he reigned 50. yeares, 5. moneths, and 7. dayes. Againe, King Edward the 6. began his raigne the 31. of Januarie, 55. yeares since, vntill this yeare, he reigned 6. yeares, 5. moneths, 19. dayes: but to make it more plaine: I haue set downe this table of the Kings, in order as they raigned, with the yeare of our Lord, and the monthy when they began their raigne, &c.

| Edward. 3. | 1327. Ianu. | Q. Mary. | 1553. Iuly. |

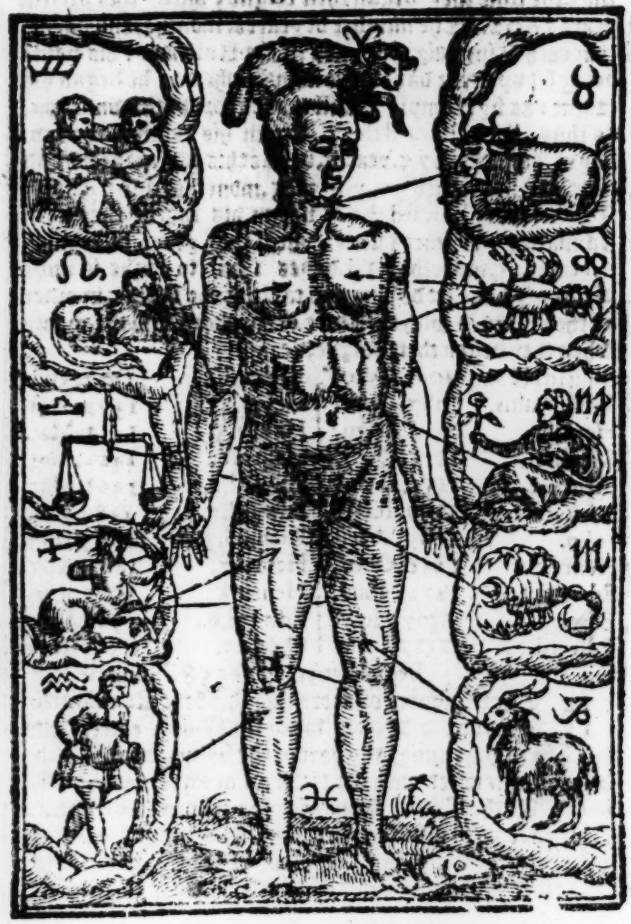
Queene Elizabeth began her regne. 1558. Nouember.

10 The beginning of euery month, of the Rom. Kalen.

11 The time and houre when the Moone entreth into any signe, gouerning any part of the body, whether it be before noone noted with the letter a. or after noone, noted with p. As the first of Januarie, the Moone entreth into Virgo at two of the clock in the morning, the 3. day into Libra at 7. before noone: the 5. day in Scorpio, at 2. after noone: the 7. day in Sagittarius at 11. before noone.

# *The Anatomie of mans body,*

## and what part thereof is gouerned by euery of the 12. signes of the Zodiaque, &c.



# A deſcription of the twelue *ſignes, and how they gouerne* in mans body.

The crokt horne Ram, the whole head doth hold
The roaring Bull, in the neck is bould,
The louing Twins, the Armes doth imbrace:
In the Breſt, the Crabfiſh hath his place,
The Lyon ſtoute, doth gouerne the hart,
The Virgin in the belly hath her part,
The equall Ballance, the Raines doth proue,
The Scorpion, the ſecret parts doth loue:
The Shooter, the Thyghes of man doth craue,
The Goate in the Knees, a part will haue:
The Water-bearer, the legges doth kepe:
The Fiſhes doth deſire the feete.

Aries, the head: Taurus the necke: Gemini, the armes: Cancer, the breſt: Leo, the hart: Virgo, the belly: Libra, the reines: Scorpio, the ſecret partes: Sagittarius the thighes: Capricornus, the knees: Aquarius, the legges: Pisces the feete.

# Imarie hath.xxxi.dayes.

For to know the houre and minute of the Sunne rising and setting, and the length of the daye and night: First double the houres and minuts of Sunne setting (heare noted for each day) and you haue the time from sunne rising to the setting.

# A neceſſary and perfect rule to know the beginning and ending of euery Terme, with their Returnes.

¶ Hillarie Terme beginneth the xviii. day of Ianuarie (if it be not Sunday) which ſo being, it is then referred vntill the day following, and endeth the xxi. of Februarie. Which Terme hath foure Returnes. That is to ſay.

Octabis Hillarij. } { Craſtino Purificæ
Quind. Hillarij. } { Octabis Purificæ.

Eaſter Terme beginneth xvii. dayes after Eaſter, and endeth the Munday next after Aſcention day. And hath fiue Returnes. That is to ſay.

Quind. Paſchæ } { Quinq; Paſchæ.
Tres Paſchæ. } Menſe Paſchæ. { Craſtin. Aſcention.

Trinitie Terme beginneth the Friday next after Trinitie Sundaye, and endeth the Wednesday fortnight after. And hath foure returnes. That is to ſay.

Craſt. Trinitatis. } { Quind. Trinitatis.
Octab. Trinitatis. } { Tres Trinitatis.

Michaelmas Terme beginneth the. ix. day of October (if it be not Sunday, as is aforeſaid) and endeth the xxviii. of November. And hath eight Returnes. That is to ſay.

Octabis Michael. } { Craſt. Animarum.
Quind. Michael. } { Craſt. Martini.
Tres Michael } { Octa. Martini.
Menſe Michael. } { Quind. Martini.

Note alſo that the Exchequer openeth eight dayes before any Terme begynne, except Trinitie Terme, in which it openeth but foure dayes before.

Ponde. 1602.

# A Prognostication

for this present yeare of our Lord. MDCII.

Being the second after the leape yeare.

In a most plaine & vulgare manner, for the better and more easie understanding of the vnlearned, or those of a meane capacity: shewing the inclination or disposition, of this present yeare: with diuers additions, most necessary to be knowne: Calculated for the Honorable Citty of London, and may very well serue for all England.

By Edvard Ponde, practitioner in the Mathematicks.

Imprinted at London for Ed. White the assigne of James Roberts.

Cum priuilegio Regiæ Maiestatis.

# To the Right Worshipfull Sir Iohn Peeter Knight, at his Manour of Thorndon in Essex;

*Ed. Ponde*, wisheth most prosperous felicity in this world, & in the world to come life eternall.

*Right Worshipfull Sir, finding my selfe deeply indebted vnto you, for all your kindnes, curtesie & great friendship, towardes me a stranger: Notwithstanding, as well the place of my nativity, as my educatio, hath bin (for the most part) in neighbour townes, adioyning nere* Ingatstone: *As also for that ingratitude hath alwaies been accounted, as a notable vice, amongst many people: Yea, the* Persians *so much abhorred the same, that they extreamely punished, such as they found more willing to receive, then to requite, adiudging them execrable vnto God, iniurious to nature, & vnprofitable in a common wealth, &c. Thus seeking by all meanes possible, to shun so foule a blemish, as vnthankefulnes is: I am incouraged vnto the Dedication of this simple and plaine worke, vnto your Worship. A thing I confesse, not worthy the name of a Dedication: yet for want of better abillity, I haue thought good, rather to gratifie your Wor∫h. with this small testimony of my good will, (an apparant view of a willing minde) then to leaue vnsignified, my beounden duety: Humbly desiring, & likewise hoping, of your accustomed curtesie, that your Wor. will take in good part so small a trifle, weying rather the good wil of the giuer, then the vallue of the gift. And I am the more emboldned heerein, in regard of your Wor∫hips fauour & affection, vnto the famous & noble Arte & Science Mathematicall: In the which I endeuour my practise, and bend my studies, that I might attaine to some reasonable perfection, whereby I may be able to pleasure my friend, or profit my Country, so far forth as may tend to the honour & glory of God, in opening to the world his wondrous workes: In the beholding wherof, we may the more earnestly be stirred vp, to glorifie & praise the Creator of all things, both Celestiall & Terrestiall, who by his mighty power,*

*bringeth*

bringeth foorth their Armies by number, & called them all by their names: Yea, some men are of that opinion, that they thinke all these Artes to be Vaine and friuolous: And againe, other of a more obstinate minde, haue enueighed against Astronomy and Astrology, terming the Professors, by such odious, & vnchristianlike names, as are not fit to be spoken: yet aleadging nothing more against them, then that they varry one from another in their writings: But in these it fareth, as it doth in all other facultues, agreeing to the Prouerbe, Quot capita tot sententia, diuers men diuers opinions: For what Arte so perfect, that errors hath not crept into, through the imperfection of mans corrupt nature, &c. But if the accusers of these Artes, are the ignorant (Scientia non habit inimicum, nisi ignorantem) they alwaies iudge like themselues ignorantly: Againe, if by malicious emuy: why what is enuy that we should respect him? The monster of man, Sonne of deceipt, borne of hate, feeding on slaunder, cherisht with debate, a rauenous Wolfe, with cankred teeth, gnawing on poyson, a fit foode for such a monsters dyet: Now to conclude, vnto the learned and profound in iudgement, in all reuerence I answere, that the right vse of Astronomy & Astrology (abhorring al superstitiō) so long as we goe not beyand the bonds and limmets of the same, they are both necessary, honest, good and lawfull: to the approouing whereof, I referre the discreet, learned and wise, vnto the exposition and deciding, of these partes of Scripture: Gen. 1.14. Esay. 40. 20. Psal. 8. 13. Psal. 147. 4. Iob 9.9. Iob. 38. 31. 32. Rom. 1.19.20. Thus Right Worshipfull Sir, hoping you will accept in good part, aswell my rudenes in writing, as the tediousnes of the same: In all humilsty, I rest at your Worships commaund, in whatsoeuer my abillity shall be able to extend vnto: Hartily wishing vnto your Worship and all yours, prosperity in this life: And in the life to come, Celestiall glory, and endlesse felicity.

Your Worships to commaund:

*Edward Ponde.*

# *Astronomicall Elections, briefly* deſcribed for adminiſtration of Phiſicke, & husbandry obſeruations.

Generally, bloud may be let, when the Moone is in Aries, Libra, Sagitta. or Piſc.

Perticularly, for Phlegmatike, in Aries or Sagittarius.
For Mellancholike, in Libra or Aqua.
For Choller icke, in Cancer, Scorpio and Piſces.
For the Sanguine, all afore named are good.

Good to purge with { Electuaries, in Cancer. / Potions, in Scorpio. / Pylles, in Piſces.

Good to { Prepare humors, in Gem. Lib. or Aqua. / Vomite, in Aries, Taurus or Capricorne. / Purge by neeling, in Cancer, Leo or Virgo. / Take Glisters, in Aries, Libra or Scorpio. / Take Gargarismes, the Moone in Can. & Aries. / Stop Rewmes and Fluxes, in Tau. Virg. or Capr. / Bathe, for colde diſeaſes, in Ari. Leo and Sagit. / Bathe, for hot diſeaſes, in Canc. Scor. and Piſc.

The learned Phiſition will conſider the Aſpects of the Planets, with the Starres, and alſo diuers other obſeruations Aſtronomicall, for the neceſſary and conuenient adminiſtration of Phiſicke. In regard whereof, and of thine owne bodily health and ſtrength, I wiſh thee that thou refuſe not his counſell, leaſt thereby thou refuſe that good meanes which nature and ſkill hath ordained, for the nouriſhing, ſtrengthning and preſeruing of our bodyes, euen ſo far forth, as that the preſent eaſe of our bodies, bee not preiuditiall to our ſoules, ſeeing the infirmity of our nature is ſuch, that whenas we are filled with any momentary delights, carnall and worldly pleaſures: euen then are we in moſt daunger of falling from God, and looſing our ſelues in a Satanicall labyrinth, moſt curiouſly plotted and

drawne,

drawne, with an number of diabolical deuises: From all which snares, our good God preserue and keep vs from all our aduersaries, and that we may at all times remember, euery one in himselfe, and with his heart to thinke, and say: Beholde, I slee p in dust and oblivion, if thy hand (O Lord) doe not vpholde me, I can not be able to stand. Graunt this (O Father) for Jesus Christ, thy Sonnes sake. Amen.

## Briefe Rules of Husbandry.

PLant and graft, the Moone increasing, in Taurus or Aquarius, the winde neither North nor East.

Fell hard Timber, from Midsommer vntill January, in the wane of the Moone.

Fell Coppice and Fuell, in the first quarter.

Geld or Libbe Cattle, the Moone in Aries, Sagittarius or Capricorne.

Gather fruites, heardes and flowers, to haue them in most beauty, and greatest vertue, the Moone at the full.

Sheare sheepe the Moone increasing.

Set and sow, the Moone in Taur. Virg. or Capri.

Remoue Grafts or Trees, at the last quarter of the Moone.

Cut hayre to grow soone againe, the Moone increasing, in Taur. Virg. or Libra.

To preserue and keep thy hayre from falling: hot scalding Bathes keep, hate wanton company, abstaine from Venery, purge Choler warily, and let bloud needfully.

The

# The Law dayes, whereon these Courts heere named, are appointed to be kept, this present yeare 1602. That is to say.

On all these dayes is kept.

| Know yet, there may be for some cause, other Court dates appointed & kept but these are the Lawdaies accustomably kept. | The Court of the Arches, in Bowe Church in the forenoon. And the Admirall Court, for Civil causes, in Southwarke, in the afternoone. | The Court of the Audience of Caunterbury, at the Consistory of S. Paules Church in the forenoone, & in the same place, the Pterogative Court of Canterb. in the afternoone. | The Consistory Court of the Bi. of London in S. Paules Church in the forenoon, & the Court of Delicates, and of her Highnes Comissioners, upon appeales, in the same place, in the afternoone. |

| 14 29 | 11. 12 | 2. 8 | Sob. Douer. Harw. Yarm. | 10. 30 |
| 15 30 | 12. 0 | 3. 0 | Calliee. | 11. 15 |

First, know the time that the Moone commeth to the South, as by the next rule is taught: then for what place you desire to know the Tyde, seeke in the Table before, and the houres and min. there found, adde or put to the time of her comming to the South, &c. As for example: the Moone v. daies olde, her South point is iiii. a clocke. I desire the Tyde at Graues end, where I finde one houre and a halfe, which added to iiii maketh v. a clocke 30. min. Full Sea at Graues end, the Moone being iiii. daies olde.

To

To know the houre of the night by the Moone, finde her age in the Almanacke, and then finding the same age in this Table, the time of her comming to the South, and vereth directly to the same: with which houre & mi. of her comming to the South repaire to a Sunne Dyall, as you would doe, if the Sunne did shine, and then what number of houres the shadow of the moon doth want of the South point, of xii. a clocke, so much doth it then want of the time found in this Table: and look how much her shaddow is past, so much is the houre past. As for Example, the Moone x. daies olde, her South point is viii. a clocke, I finde her shaddow at x. which wanteth ii. houres of xii. therefore it wanteth ii. houres of viii. a clocke, I conclude, then it is viii a clocke: Also, foure houres after, I finde her shadow at ii. a clocke, which is ii. houres past the South: which is ii. houres past viii. a clocke, therefore it is x. a clocke, &c.

# A description of the disposition of the foure quarters of this present yeare. 1602.

## Of Winter.

WInter, the fourth and last quarter of the Astronomicall yeare, began with vs the xi. day of December, being Fryday: the last yeare 1601. The Sunne then entring into the first min. of that colde earthly signe Capric. making then with vs the shortest day and longest night, being then furthest from our Zenith or Verticall point, in his greatest South declination, from the Equinoctiall line, his Meridian Altitude but xv. deg. This quarter continueth vntill the x. of March, this present yeare 1602. containing 89. daies.

As concerning the disposition of this quarter, as it is naturally colde and moyste, of the Phlegmaticke complection, likned to olde age: it is like to be kindely, though there bee some greater

greater mixtes of Snow, and more distemperate sharpe & sodaine fierce windes, then in some winters last past, hath been seene, with sodaine changes of the ayre. As more particularly I haue set forth, in my dayly iudgement, of the disposition of the ayre, following in his due place.

## A generall prediction of the whole yeare.

The generall state of this yeare Astrologically collected, from the reuolution of the heauens, &c. With the great Eclipse of the Sunne, happning the xiiii. day of Decem. 1601. neere one in the after noone, darkned 10. deg. and a halfe. Continuing ii. houres, 20. min. All which doth threaten a very colde, sharpe & long Winter: Spring time vnconstant, to the hurt of fruites: many mistes and fogges: soultring hot, inclined to much moisture, with Southwest windes, likely to breed an infection or not in sheep. Grasse is like to be more plentifull then Corne, by reason of some vnkindly weather: diuers hot and strange diseases. As the plague, or such like, causing sodaine death: as also paines in the head, soarenes of eyes, burning and fretting about the heart, the Collicke, and gnawing in the bowels, casualties vnto women with childe, many abortements and griefes in the Reynes, Itchings, red spots & pushes in the face, toothache and sharpe Feuers &c.

## Of the Spring.

The Spring time, the first quarter of the Astronomical yeare, beginneth with vs this yeare, the x. of March, the Sunne then hauing finished his yearely reuolution, through the xii. signes of the Zodiacke, now entring into the first min. of ♈. or the vernall Equinoctiall point, making equall day and night, through the world, at which time beginneth our Spring, and continueth till the xii. of June, containing 93. daies, of nature hot & moyste. Of the Sanguine complection, a meete time to take Phisicke, and to purge the body of all euils, &c.

Of

## Of Summer.

Summer the second quarter of the yeare, beginneth the xii. of June, at the Sunnes entring into ♋. making our longest day & shortest night. This quarter containeth 94. daies, of nature hot and drye, &c.

## Of Autumne.

Autume, or fall of the Leafe, beginneth the xiii. day of September, the Sunne entring into ♎. making equall day and night, of nature colde and dryes: this quarter containeth 89 daies.

*Of the time of the comming to* the South of the Planets, & of diuers of the fixed Starres, most easie to be knowne, &c. Whereby, any man may (the Starres being seene) perfectly know the true time of the night As also, to know those Planets, and Starres, I haue noted diuers times, when the Moone shall bee seene in the South, with the same starres there named, I haue here set downe their South being, the first day of euery month: but to know the time for euery day, all these Starres except Saturne, Iupiter and Mars, doe come to the South sooner, by an houre in xv. dayes, & by 4. min. in one day, &c. Also the inclination and daily disposition of the weather.

### January.

| | | | |
|---|---|---|---|
| ☽. Starres sou. | Canis maior. sou. | Canis minor. sou. | cor leo. so. |
| 7. 50. mi. E. | 10. 47. mm. E. | 11. 48. E. | 2. 27. Mo. |
| Mars. south. | Iupiter. south. | spic. virgin. sou. | saturn sou. |
| 3. 56. mor. | 5. 47. mor. | 5. 35. mor. | 7. 40. mo. |

Note the first number is the houre, & the second number of min.

min. past the same houre, & 60. min. make an houre. Against the letter E. denoteth the Euening, or time before mid-night, & M. for morning, or the time after mid-night.

The first & second daies, sharpe ayre, and nipping winde. The iii. & iiii. very colde, yet kindely.

Last quarter the v. day, the vi. & vii. sometime freezing, & a sharpe windy quarter. The vii. day, a quarter of an houre after vii. in the morning, the Moone shall be in the south, with the Planet ♄, 4. degr. vnder him, more Southward. The viii. & ix. colde windy stormes are threatned. The x. xi. & xii. sharpe close ayre.

New Moone the xiii. day, some moisture likely. The xiiii. winterlike weather. The xv. xvi. xvii. variably inclined to sleet. The xviii. & xix. indifferent winter weather.

First quarter the xx day, & xxi. frost or snow. The xxii. & xxiii snow bankes appeare. The xxiiii. day the Moone commeth to the South, with canis maior, halfe an houre after ix. at night. The xxiiii. & xxv. apt to inconstancy. The xxv day the Moone commeth to the South with ca. Mi. halfe an houre after x. at night. The xxvi. bent to some fall.

Full Moone the xxvii. day & xxviii variety of weather, with darke colde ayre, threatning sleete. The xxix. litell amended. The Moone commeth to the South with cor leonis at mid-night. The xxx. day, kindely good weather. The xxxi. day a quar. before 2. in the morning, the moone commeth to the south with Mars, the moone 8. deg. vnder Southward. The xxxi. extreame colde and close.

## February.

| | | | | |
|---|---|---|---|---|
| The 7. stars. | so. canis maior. | so. canis minor. | so. cor leo. | so. |
| 5.51. Euen. | 9. 0. Euen. | 9.49. Euen. | 12.18. mor. | |
| Mars. sou. | spica Virgi. sou. | Iupiter. south. | Saturn. south. | |
| 1.41. mor. | 3.36. mor. | 3.42. mor. | 5.40. mor. | |

The first & second daies, colde winde and vncertaint. The i.

day

day at iiii. a clocke in the morning, the Moone is in the South with Iupiter, the Moone 6. degrees lower, Southward. The first day halfe an houre after iii. in the morning, the Moone is South with spica virginis, 3. deg. lower South.

Last quarter the iii. day, a close moyste ayre. The iiii. v. & vi. tending to frostes. The vii. viii. & ix. good for the time. The x. & xi. very colde pinching ayre.

New Moone the xii. day, threatning moisture. The xiii. day the Moone seeteth, 2. houres & a quar. after the Sun. The xiii. & xiiii. faire & dry. The xv. & xvi. some moisture falleth. The xvii. & xviii. kindely for the time.

First quarter the xix. day, the xx. & xxi. vncomfortable & wet. The xxii. & xxiii. often cloudy. The xxiiii. & xxv. sharpe windes bent to moysture.

Full Moone the xxvi. day, close & colde, like to snow. The xxvii. & xxviii. temperate.

## March

| | | | |
|---|---|---|---|
| The 7. stars. so. | canis maior. so. | canis minor. so. | cor leo. so. |
| bef. sun. set. | 7. 2. Eue. | 7. 53. Eu. | 10. 22. E. |
| Mars. sou. | spica virgin. so. | Iupiter. sou. | saturne. so. |
| 11. 17. Eue. | 1. 40. morn. | 1. 49. mor. | 3. 55. mor. |

The first & second faire, though cloudy. The iii. and iiii. some tempest, or fall is threatned.

Last quarter the v. day, & vi. more pleasant then the former. The vii. viii. & ix. most part dry. ☉ in ♈. the x. day. The x. & xi. very colde windes. The xii. temperate.

New Moone the xiii. day, & xiiii. variably disposed. The xv. xvi. xvii. & xviii. vnconstant, with some blustering stormes. The xix. friendly March weather.

First quarter the xx. day, & xxi. bent to variety. The xxii. xxiii. xxiiii. xxv. & xxvi. most part drye and kindely.

Full Moone the xxvii day, & xxviii. windes aloft. The xxix.

xxx.

xxx. & xxxi. a variable and cloudy disposition.

## April.
